Education

Michigan State University East Lansing, MI
Bachelor of Science, Computer Science, Honors College, GPA: 3.5 *September 2021 – May 2025*

Experience

Volunteer Software Engineer July 2026 – Present
Lansing Shoals Light Station *Remote*

- Built a serverless document automation pipeline with Python and AWS Lambda for Lansing Shoals Light Station, replacing manual entry of uploaded documents.
- Integrated Amazon Textract for OCR, Amazon Bedrock for intelligent summarization and priority flagging, and S3 event triggers to process documents automatically on upload.
- Pushed the extracted data and summaries into Salesforce via REST API, delivering processed records to staff within seconds of upload.

Salesforce and Systems Support Engineer July 2024 – February 2026
MSU IT Enterprise Services *East Lansing, MI*

- Configured Salesforce automation across 5 university departments, including record-triggered flows, dynamic forms, automated email confirmations, and field update logic, reducing manual administrative overhead for donor, student, research, and affiliate data workflows.
- Gathered requirements from stakeholders, then built FormAssembly forms connected to Salesforce flows and triggers that automated confirmation emails and record creation, testing each application end-to-end.
- Improved data integrity across enterprise systems by correcting 200+ records and merging NetIDs across Oracle, MySQL, Microsoft SQL Server, Okta, and SailPoint to maintain accurate access and role provisioning during employee and student transitions.

Projects

HAP Customer Intent Engine and Training Tool | *Python, Flask, JavaScript*

- Designed and built a full-stack call-center analytics and training platform for Health Alliance Plan, a nonprofit Michigan health insurer affiliated with Henry Ford Health, as a university capstone project.
- Analyzed 500+ customer service transcripts with Python and pandas to extract call volume, duration, and common call reasons, visualized in Plotly Dash dashboards for HAP trainers.
- Built Flask REST endpoints to deliver call analytics to the frontend and an FPDF export that packaged every chart and table into a downloadable report.

Music Trivia Web App | *TypeScript, Next.js, React, Last.fm API, Railway*

- Built a multiplayer music trivia web app with TypeScript, Next.js, and React, pulling each player's listening history from the Last.fm API to generate personalized questions with music they actually listen to.
- Built multiplayer lobbies with live game updates, setting up automated CI/CD deployment pipelines on Railway via GitHub to ensure smooth, continuous updates as friends join from their own devices.

Pet Cues: AI Club at MSU | *Python, React, Next.js, Flask, DeepLabCut*

- Proposed, scoped, and led development of a web platform for first-time dog owners to interpret dog body language using computer vision, directing a team of 7 across frontend, backend, and ML components.
- Designed the split between the React/Next.js frontend and Flask backend, including the API between them, enabling parallel development across the team.
- Researched DeepLabCut-based pose estimation workflows using the Stanford Dogs dataset in an emerging research area without standardized tooling or labeled behavioral datasets.

Technical Skills

Languages: Python, JavaScript, TypeScript, C/C++, SQL, C#, HTML, CSS
Frameworks & Libraries: React, Next.js, Node.js, Flask
Cloud & Platform: AWS (Lambda, S3, Textract, Bedrock), Salesforce, FormAssembly
Databases: MySQL, Microsoft SQL Server, Oracle, Firebird
Tools: Git, Docker, Linux, Claude Code, GitHub Copilot
Concepts: Object-Oriented Programming, Data Structures and Algorithms, Unit Testing, Agile/Scrum, REST APIs
Certifications: Salesforce Certified Associate
